V92N

Swash-plate Type Axial Piston Variable Displacement Double Pump

V92N variable axial piston double pump, unique joint bearing structure, is designed for the high pressure open circuit.

Displacement (cc/rev):	120×2
Nominal pressure (bar):	350
Max. pressure (bar):	400

Contents

Technical Data	02
Type introduction	03-04
V92N 120 Type	
• Control principle	05
• Installation size	06-08

Features

- Variable axial piston double pump design for the open circuit.
- High working pressure (400 bar) and long lifetime.
- Advantages such as high load capacity, strong impact resistance, wear resistance, and self centering.
- Combination of control methods, optional installation of angle sensor, achieving closed-loop flow control and higher control accuracy.
- More suitable for mobile machinery like excavators, cranes, drilling rigs and so on.

Technical data

Size	V92N 120
Displacement(cc/rev)	120×2
Speed	Rated speed (rpm) ^{*1}
	2350
Pressure	Maximum speed (rpm) ^{*2}
	2700
	Rated pressure (bar)
	350
	Maximum pressure (bar)
	400
Maximum torque (N.m) @Vgmax and Δp=380bar	1452
Case volume (L)	2.7
Suction port pressure (abs bar)	0.7 ~ 2
Drain pressure (bar)	1
Max. drain pressure (bar)	3
Mass (Kg)	127
Temperature range (°C)	-20 ~ 95
Hydraulic fluid viscosity range (mm ² /s)	10 ~ 1000 ^{*3} (optimum viscosity range 16 ~ 36)

1 Steady state suction pressure should be 0 bar and above (at normal condition);

2 If suction pressure less than 0 bar, Boost pressure should be required;

3 In case of 200-1000mm²/s, please allow system to warm up before using machine.

V92N 120 Control principle

• E1 Electro-proportional displacement control principle

Electro-proportional displacement control: With pilot-pressure-related control, the pump displacement is adjusted in proportion to the pilot pressure. Basic position without pilot signal is V_g min, which includes the mechanically depressurized basic position $V_{g\min}$. With increasing pilot pressure the pump swivels to a larger displacement. The necessary control power is taken from the operating pressure or the external control pressure applied to port P. If the pump is to be adjusted from the zero basic setting or from a low operating pressure, port P must be supplied with an external control pressure of at least 30 bar, maximum 50 bar.

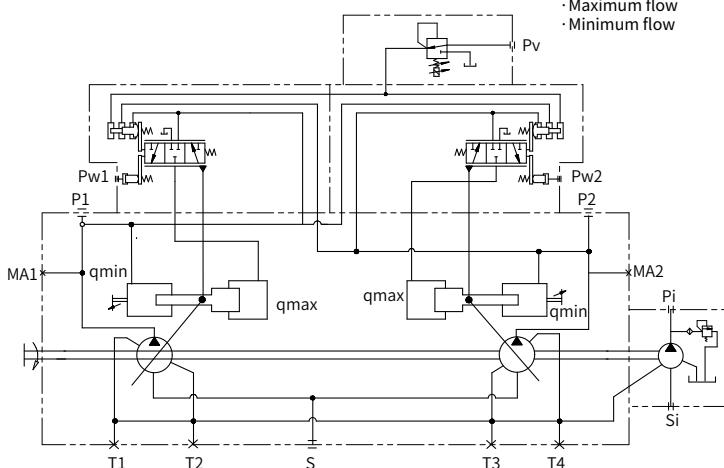

Note:

When ordering, please provide the information as below:

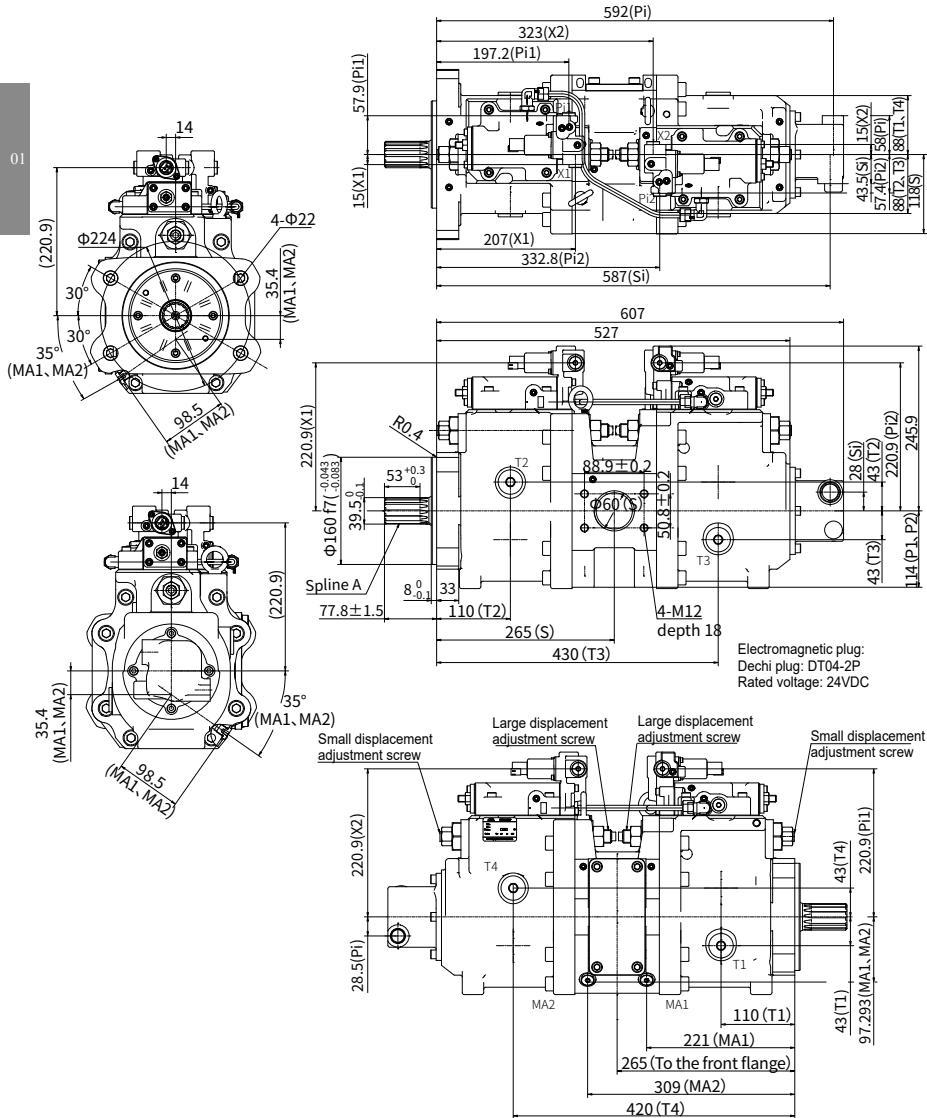

- Working pressure
- Maximum flow
- Minimum flow
